

## Product Summary

UK and Ireland Coastlines is a spatial dataset containing coastal and inland boundaries for England, Scotland, Wales, Northern Ireland, Ireland, the Isle of Man, and the Channel Islands. The data is suitable for a wide range of applications including thematic mapping.

The dataset has been produced by combining open data published by the Office of National Statistics (ONS), Ordnance Survey of Northern Ireland (OSNI), Ordnance Survey Ireland (OSI), and the Department of Energy and Climate Change (DECC).

Please see the Underlying Data Products List for more details on the data sources.

Re-use of the OSI boundary data for Ireland is subject to the terms of the [Creative Commons Attribution License 4.0](#) (CC BY) and re-use of other boundary data is subject to the terms of the [Open Government Licence](#) (OGL). The OGL is a slightly more permissive licence than CC BY, so the combined dataset as a whole is re-usable under CC BY.

## Data quality statement

Datadaptive has taken reasonable care in compiling and preparing the data. The accuracy and currency of the data is dependent on the underlying data sources.

The boundaries for the Isle of Man and the Channel Islands are less detailed than the other boundaries.

Datadaptive has not made any attempt to reconcile the boundaries of Ireland and Northern Ireland, so at high resolution there are some minor gaps and overlaps.

## Data formats

The boundaries are supplied in unstyled ESRI Shapefile format with the WGS84 projection.

## Licensing

Re-use of the data is subject to the terms of the [Creative Commons Attribution License 4.0](#). Please see the Product Summary for more information.

## Attribution

## File Specifications

### UK and Ireland Coastlines

File name: UK\_IRELAND  
Record count: 7  
Geographic coverage: UK, Ireland, and UK Crown dependencies  
File format: SHP

This file is a spatial dataset containing polygons for the boundaries of each country or Crown dependency. (The Channel Islands are combined as one record.)

Following is a table of the attributes provided for each boundary.

Field	Type	Description
GEONM	Text	Name of geographic entity
